Sprint 4 Chart

The burndown chart for sprint 4 begins completely flat and then rapidly begins to climb upwards. This indicates the fact that we added our story points after the sprint had already started. Towards the end of the sprint there is a very large drop, which is certainly due to how we managed our tasks on Jira. A lot of them were marked as completed around the very end of our development. Overall, we feel that our tracking habits have improved and progressed over the course of this project, however, they could still use more refining.

In terms of the velocity, it remained similar compared to sprint 3 and also had a similar number of story points completed. This consistency (approximate) is due to the continuation of our tracking practices which we used in sprint 3. Although our burndown charts prior to sprint 3 were terrible, we corrected our tracking process for sprint 3 and carried those changes forward into sprint 4. Essentially, we found what was working well for us and continued with those factors in mind.

For future projects, we will certainly consider refining these processes even more. There were a couple tasks which should have been marked off as completed earlier than they were actually marked off. This is something we will have to work on.
